One of the most interesting features is the Pen tool. You can easily erase the background to create a new layer. You can use that new layer to refine an area and the rest of the image can be automatically adjusted or tied into a brush set. One of the best features includes the ability to have a light and dark version of the image, allowed by an auto mode. All of the adjustments provided are default settings that let you begin a new project. The update is based on the brand new architecture that combines the most modern design with Adobe's existing background in the past. Even the software is redesigned to make it even better and faster, with fewer hiccups. It has become much more intuitive and an even better experience for anyone adjusting photos. the features at once and get to the work you do instantly and your work will look great with a tweak or two. Conclusion: Lightroom wins in the RAW category and Photoshop loses a star mostly because of missing features in the default configuration. It also isn't much of a mainstream image editing application, so there is not much incentive to mess it up. I don't think people will really enjoy, for example, editing RAW with Photoshop. Yes, that sort of thing is possible, but it is a bit of a pain. For those who have the patience, there is no doubt that Lightroom is the way to go. However, the fact that Lightroom 2 Universal has enough issues to cost an extra star is quite alarming. Of course, there are a lot more features in the Pro version (though I think Photoshop is currently more balanced), so perhaps the community will prevent these problems from further damage down the line. Either way, Lightroom 2 is definitely a recommended product, regardless of which version you buy.
